

Appendix B: Building the SDK API documentation

The SDK documentation can be viewed [online](#), but is also part of the SDK itself and can be built directly from the command line. If you haven't already checked out the SDK repository you should do so,

```
$ cd ~/
$ mkdir pico
$ cd pico
$ git clone https://github.com/raspberrypi/pico-sdk.git --branch master
$ cd pico-sdk
$ git submodule update --init
$ cd ..
$ git clone https://github.com/raspberrypi/pico-examples.git --branch master
```

Install doxygen if you don't already have it,

```
$ sudo apt install doxygen
```

Then afterwards you can go ahead and build the documentation for all platforms:

```
$ cd pico-sdk
$ mkdir build
$ cd build
$ cmake -DPICO_EXAMPLES_PATH=../../pico-examples -DPICO_NO_PICOTOOL=1 -DPICO_PLATFORM=combined
-docs ..
$ make docs
```

The API documentation will be built and can be found in the `pico-sdk/build/docs/doxygen/html` directory, see [Figure 30](#).

TIP

If you prefer to build documentation for a single platform only, then replace `-DPICO_PLATFORM=combined-docs` with `-DPICO_PLATFORM=rp2040` or `-DPICO_PLATFORM=rp2350` in the above, using a fresh build directory.
